

UBR3 co-IP interactors — STRING network (n=81, 110 edges, PPI-enrichment $p=1.3e-11$)
red ring = bait UBR3; colors = clusters

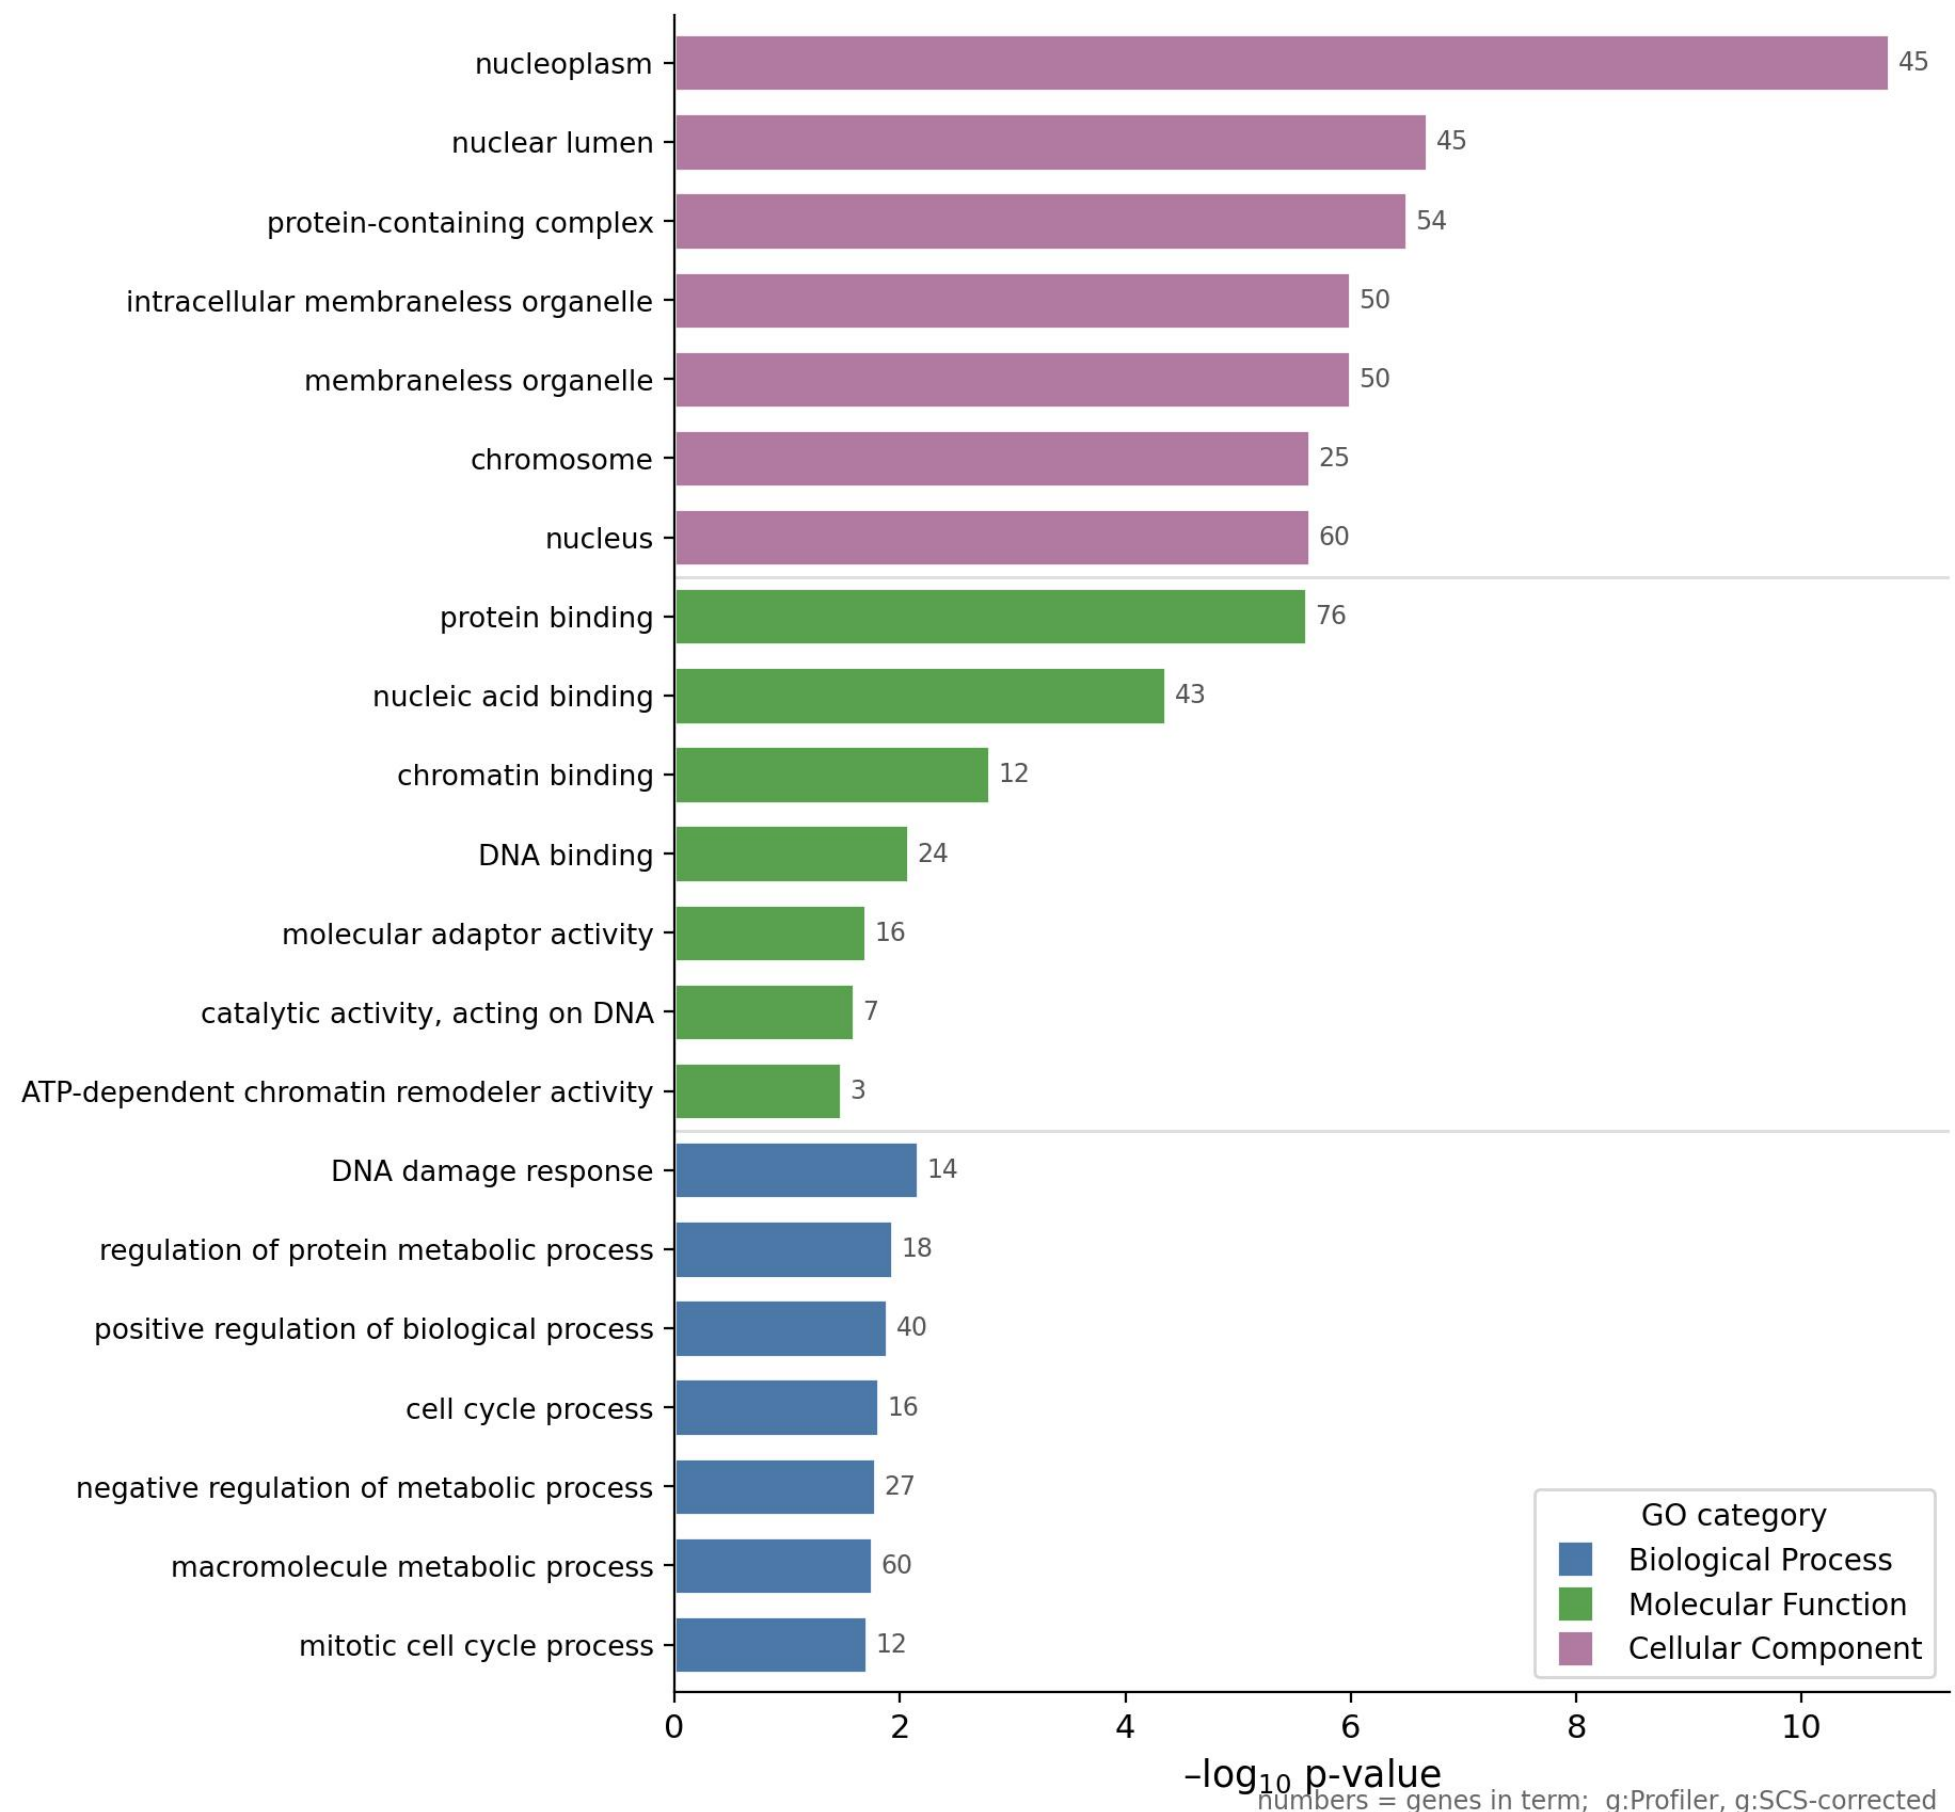

UBR3-WT interactome

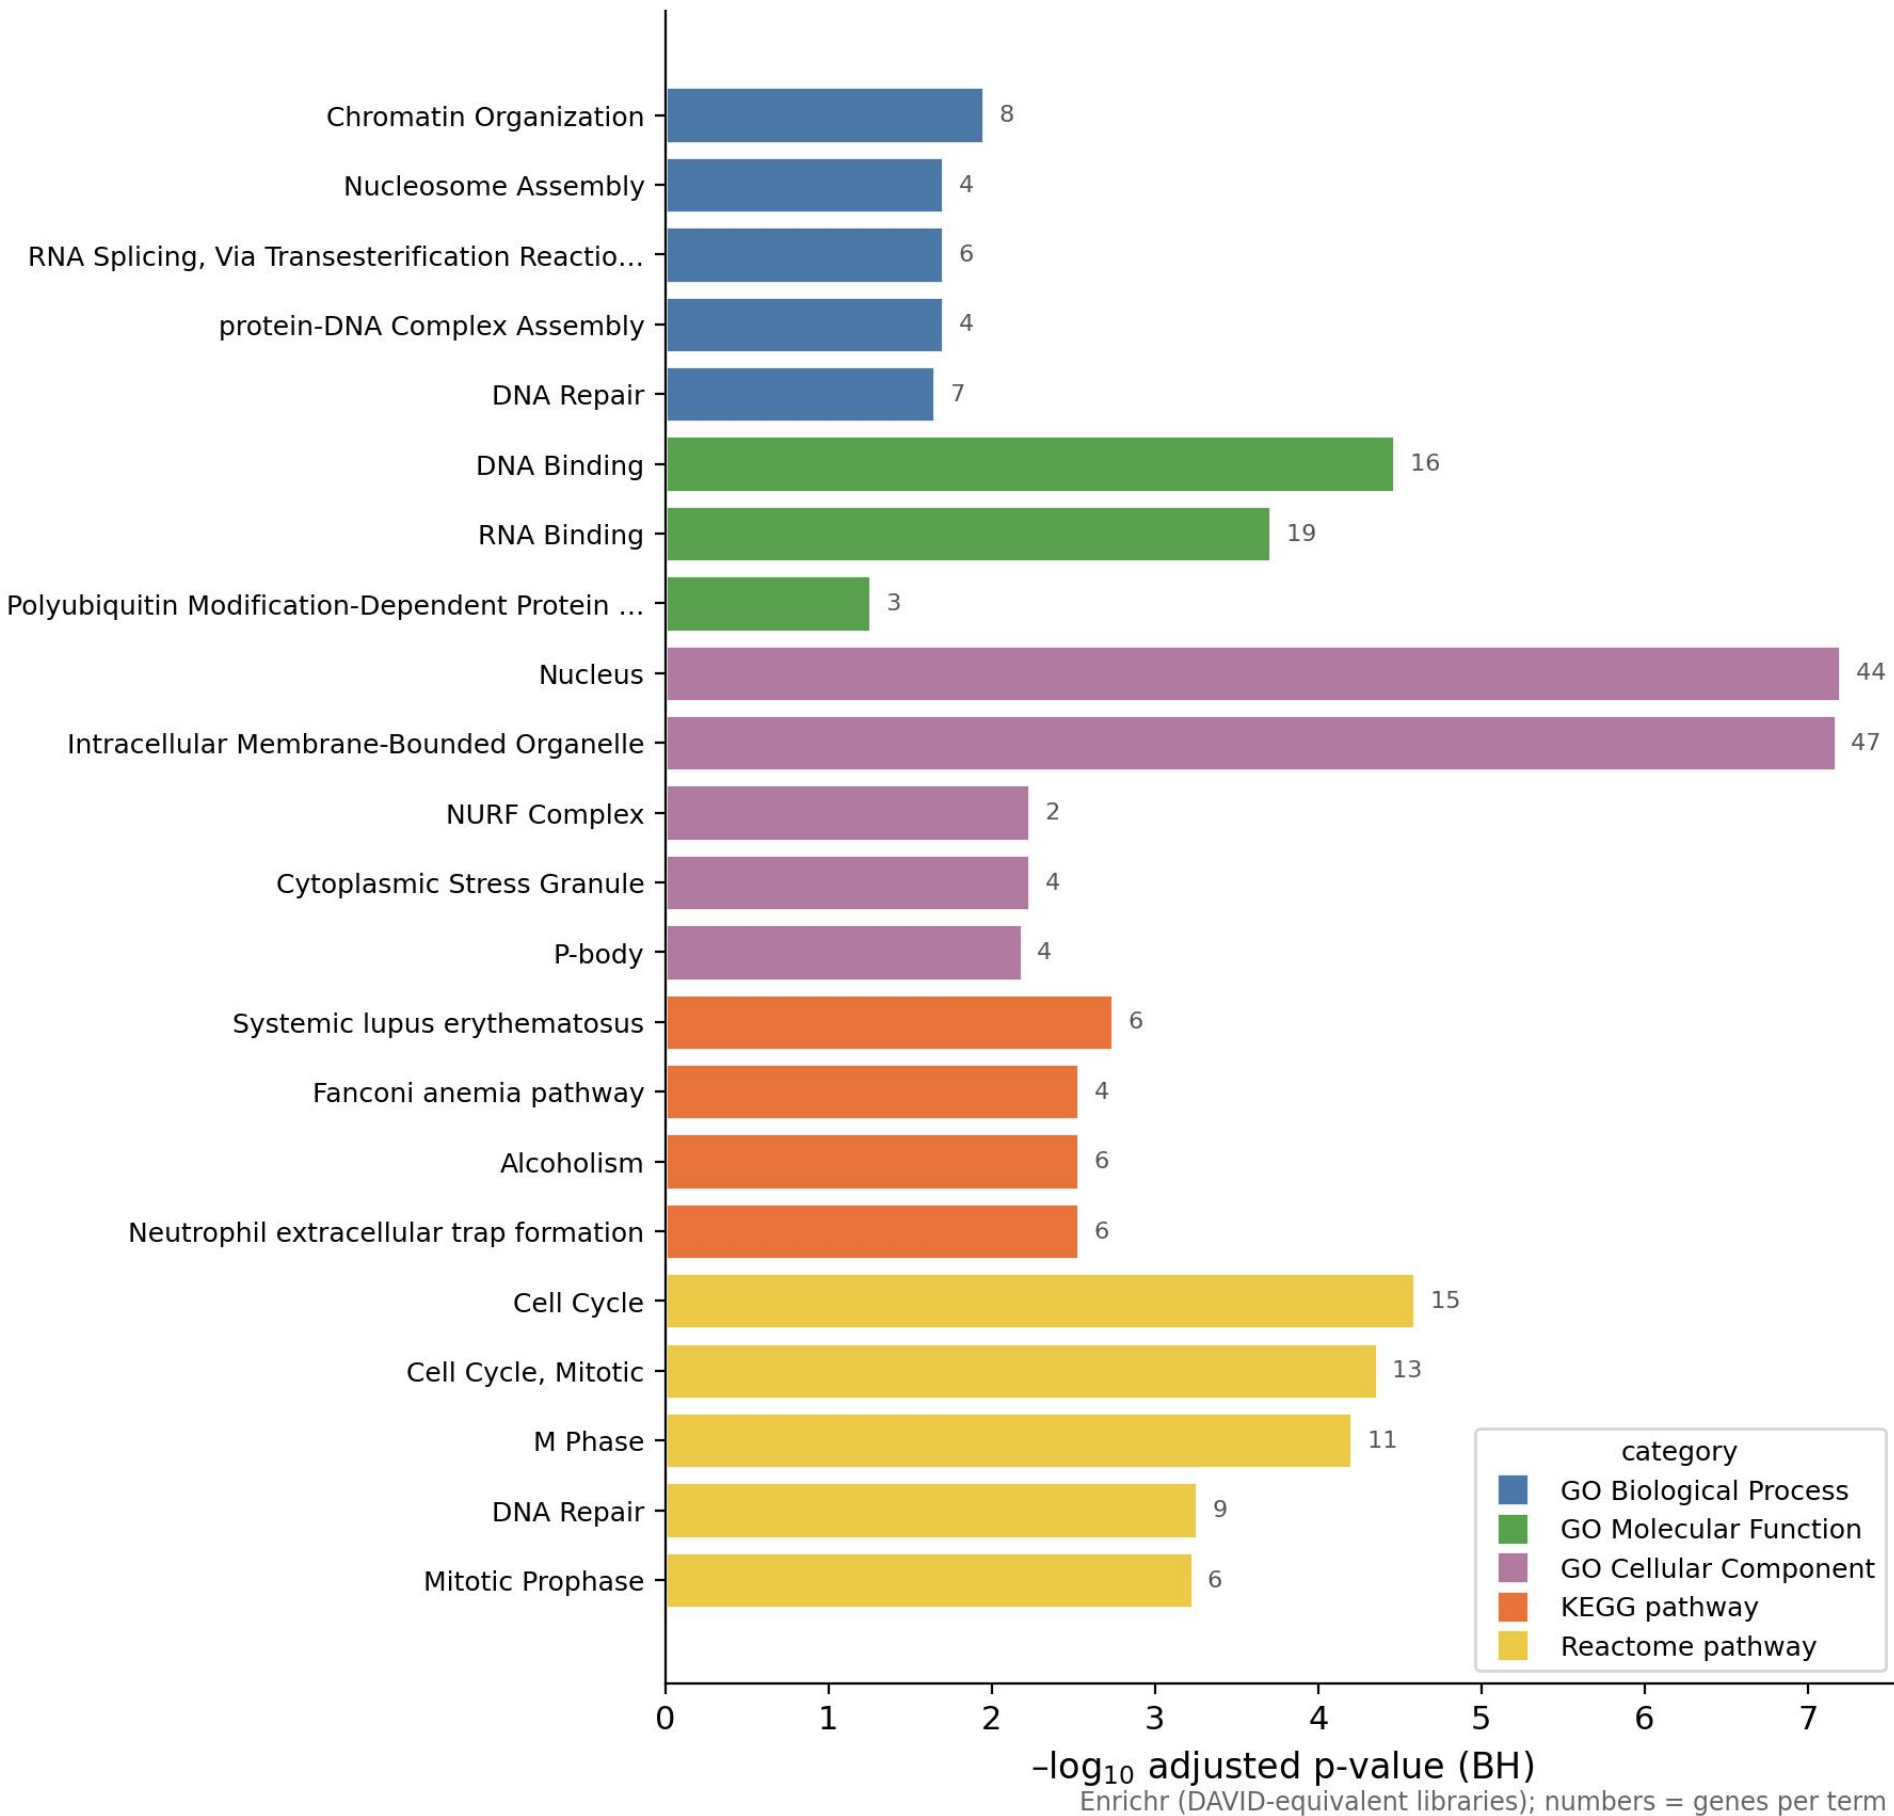

UBR3-RING interactome

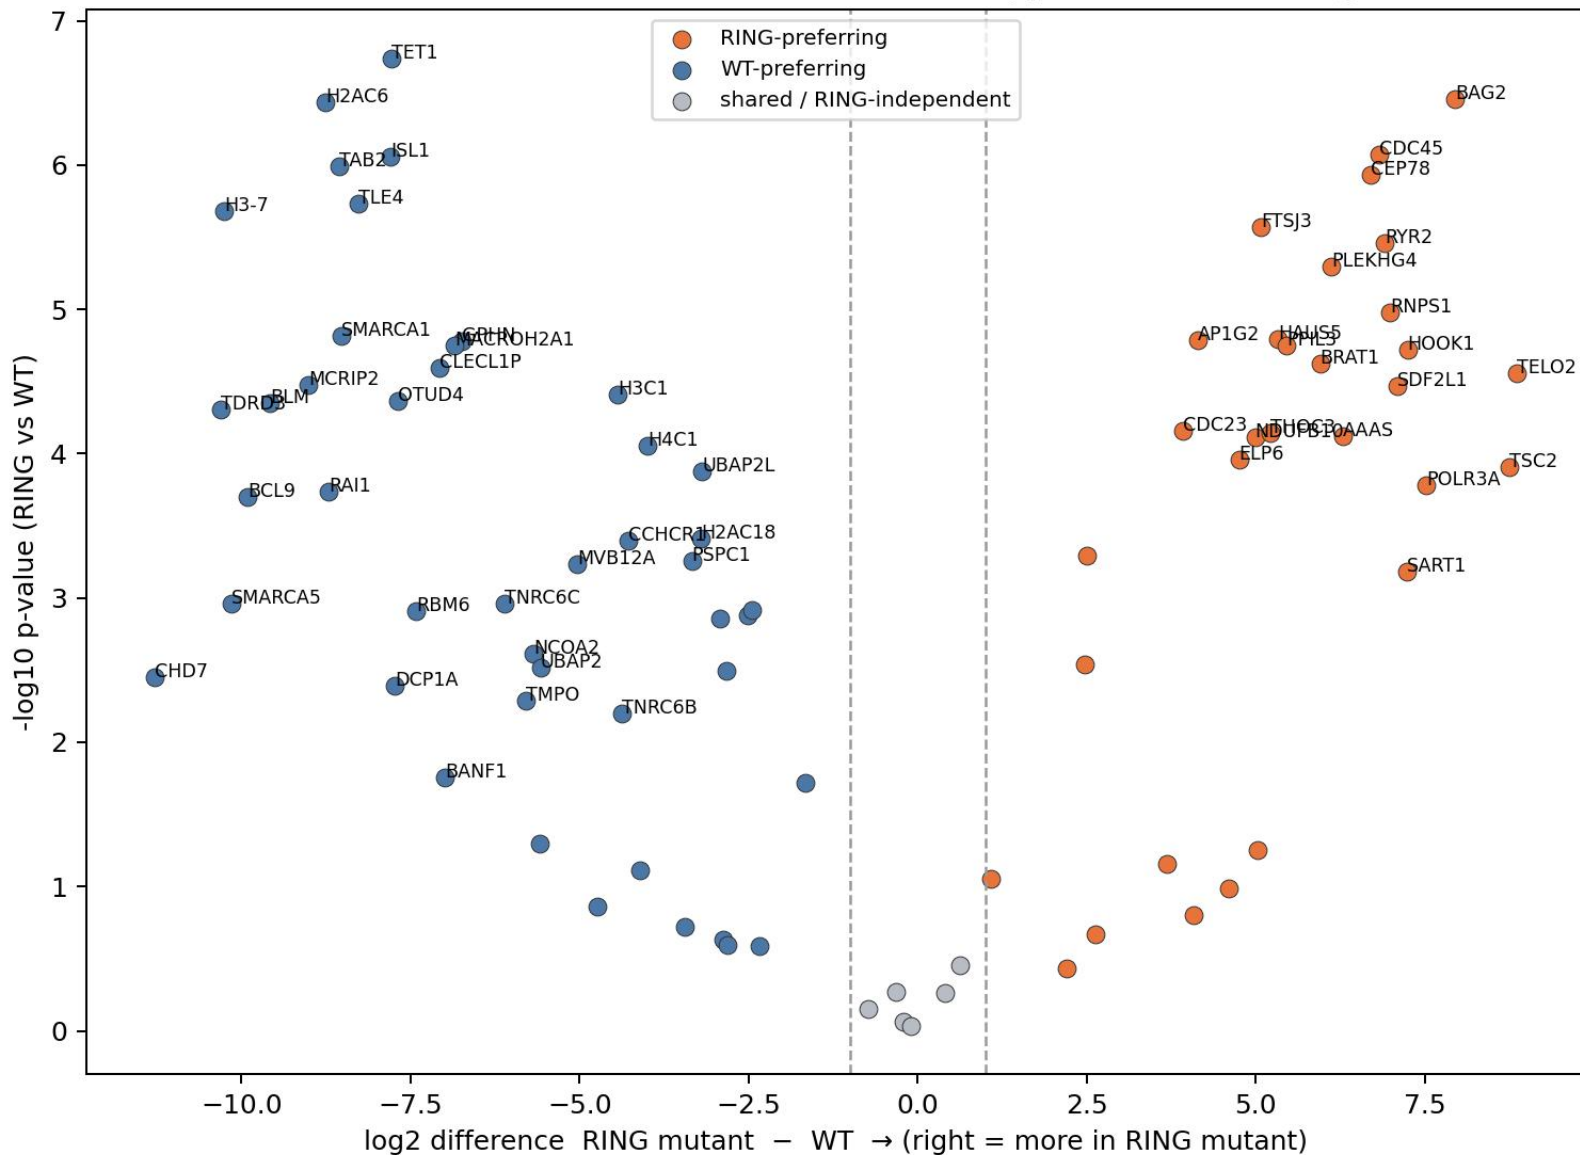

GO enrichment — UBR3 interactors (n = 82)

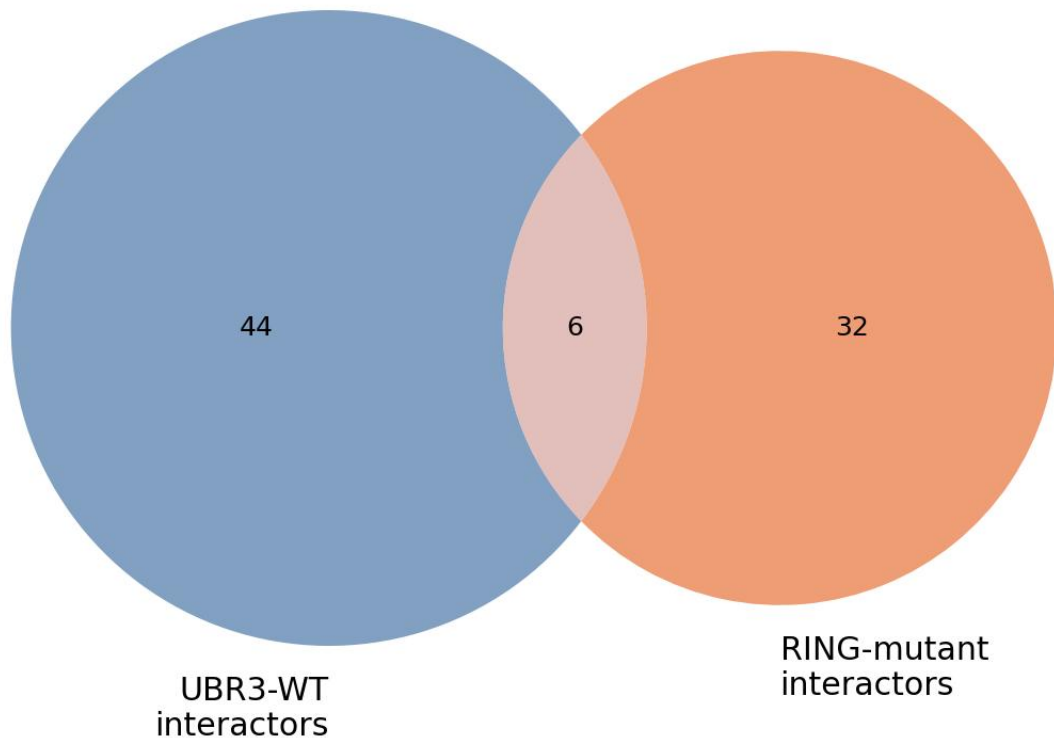

Functional annotation — UBR3 interactors (n=82)

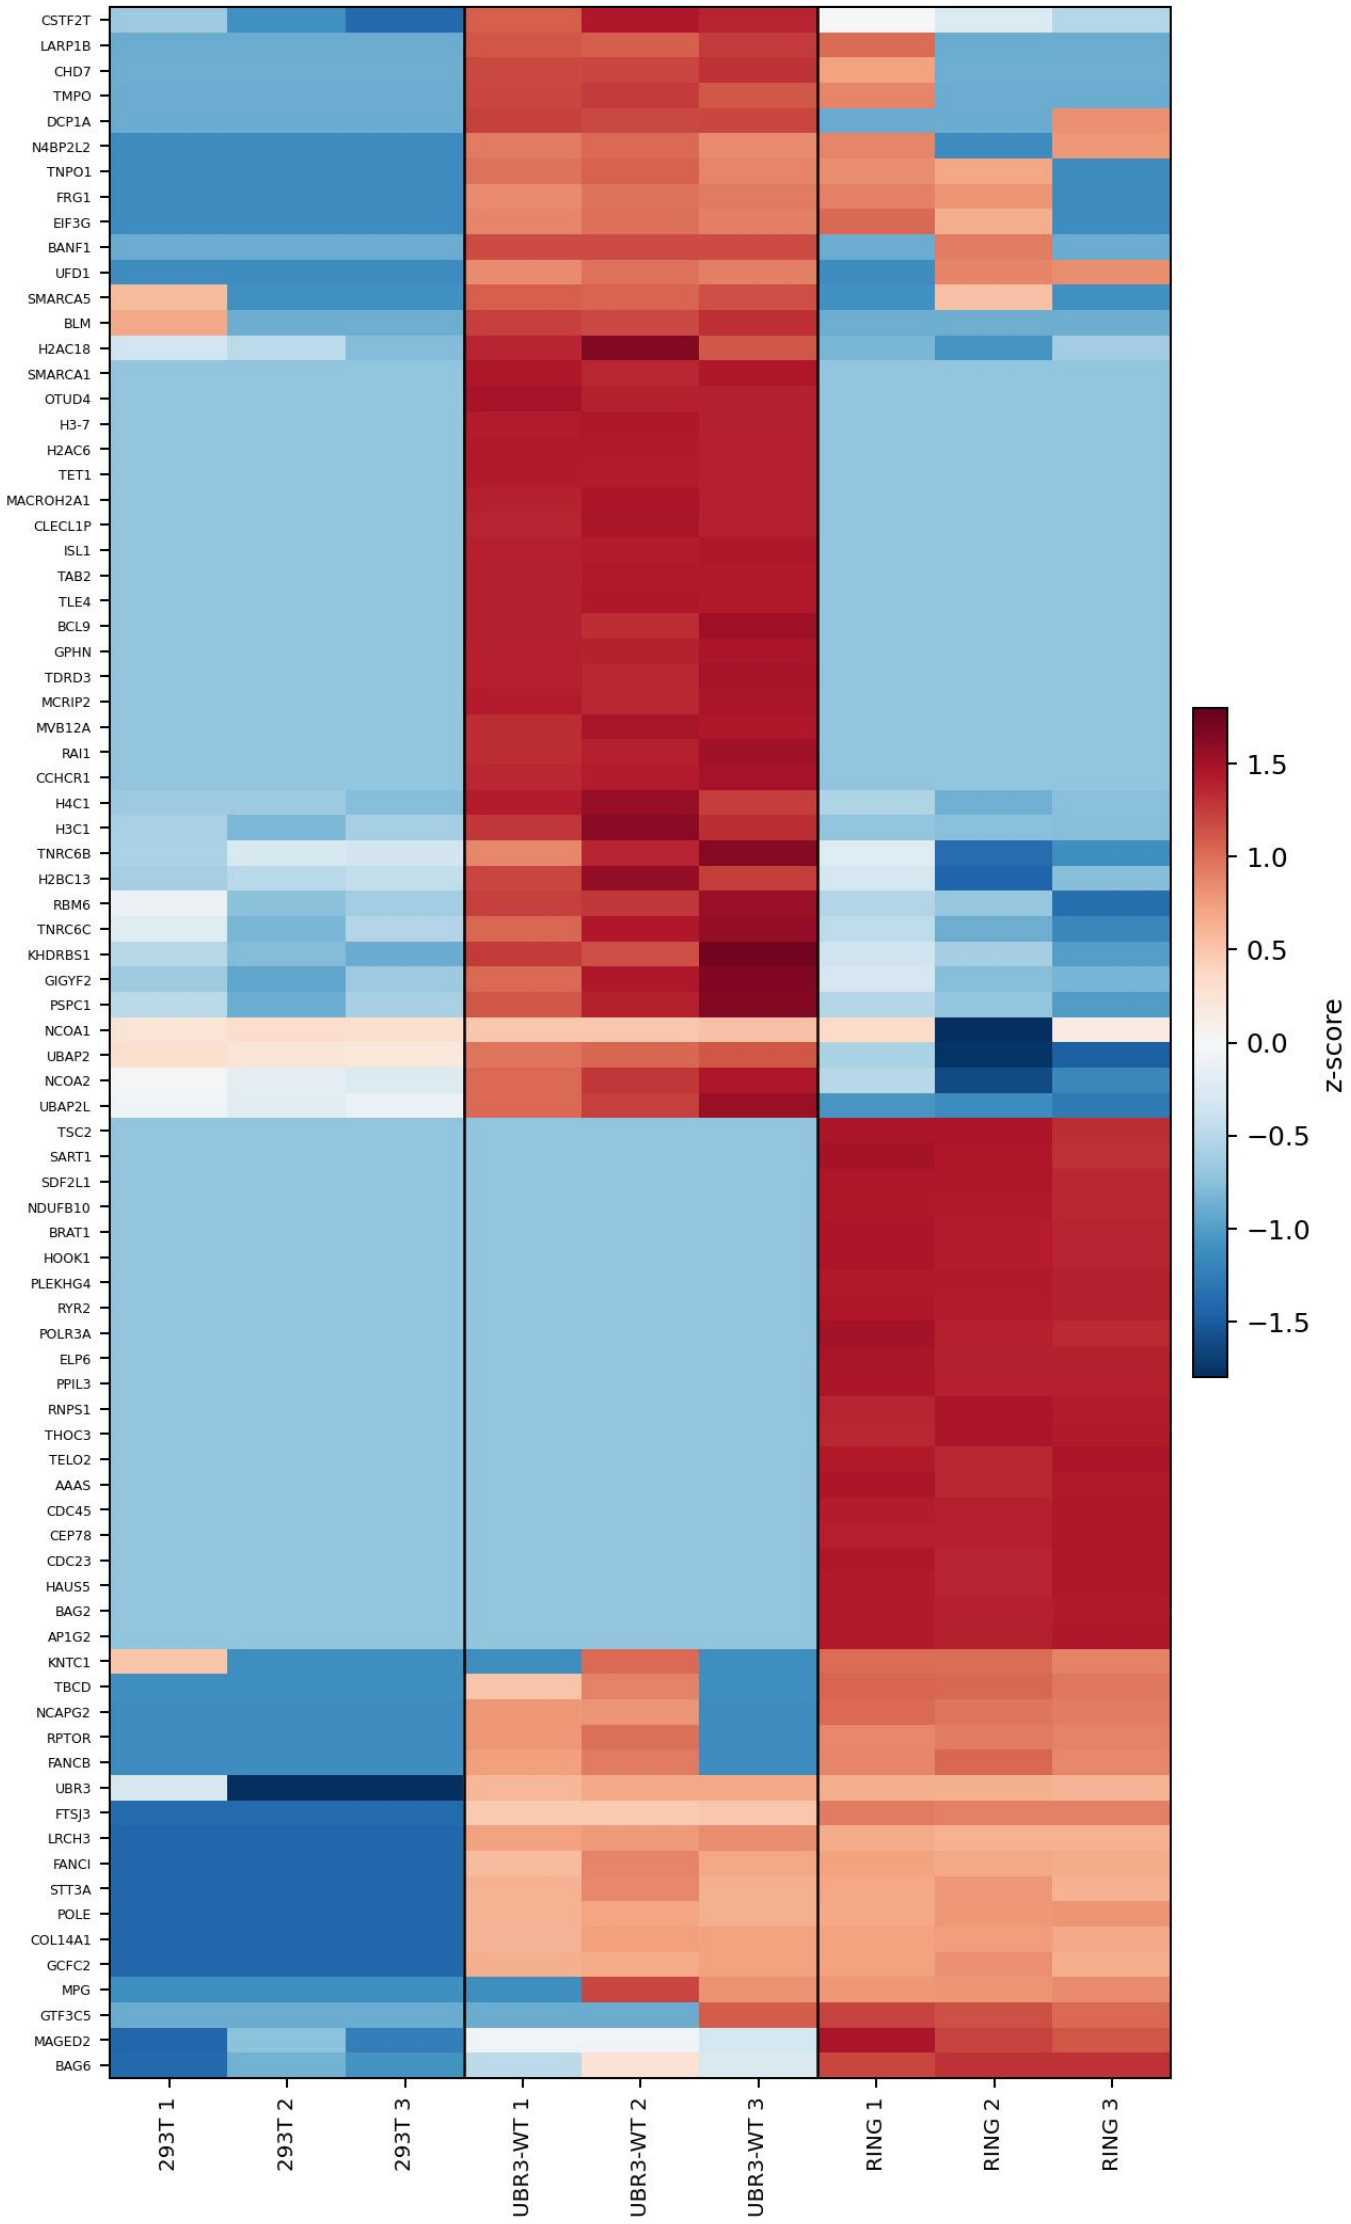

WT vs RING-mutant differential (candidate trapped substrates = right)

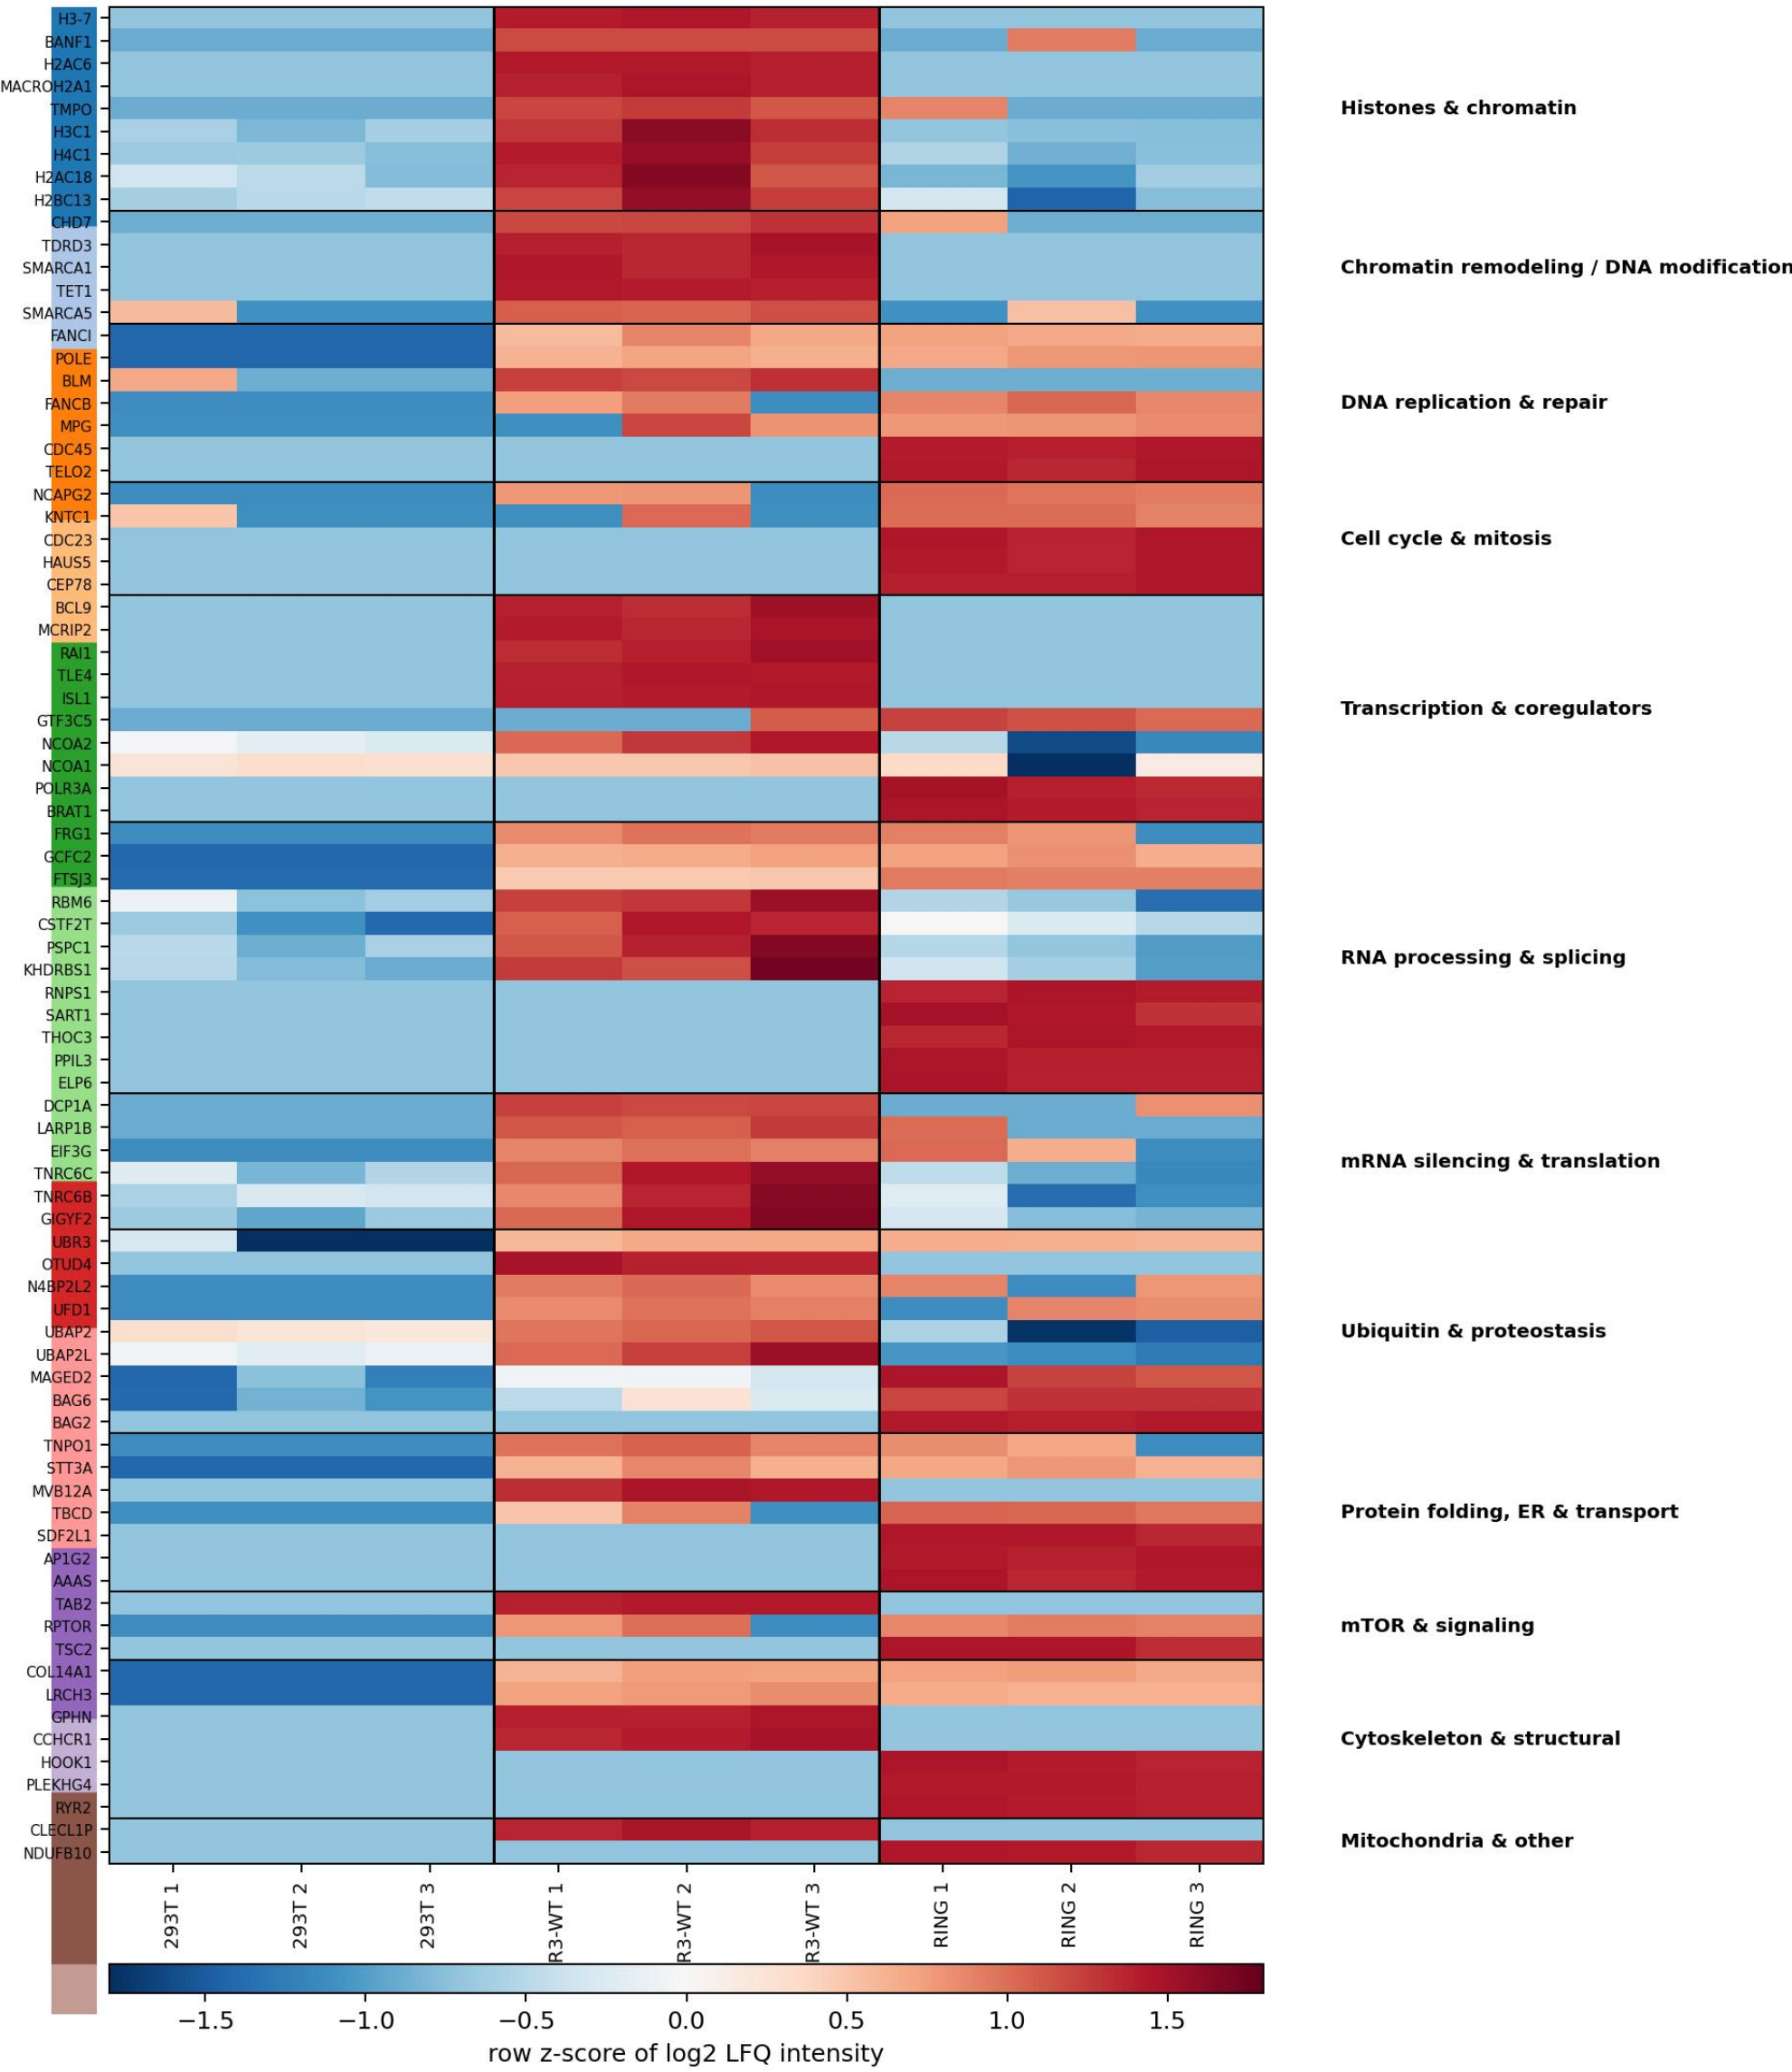

Interactor overlap (WT=50, RING=38, shared=6)

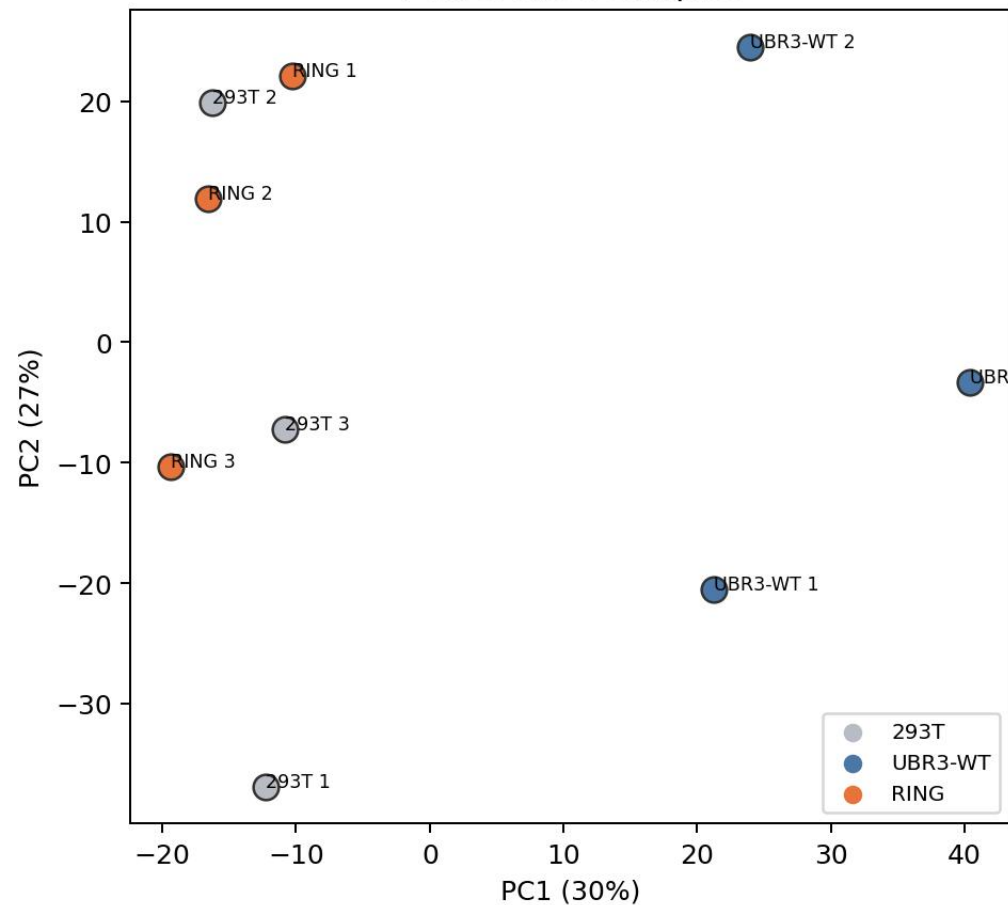

Interactor LFQ across conditions
(row z-score, log2 intensity, n=82)

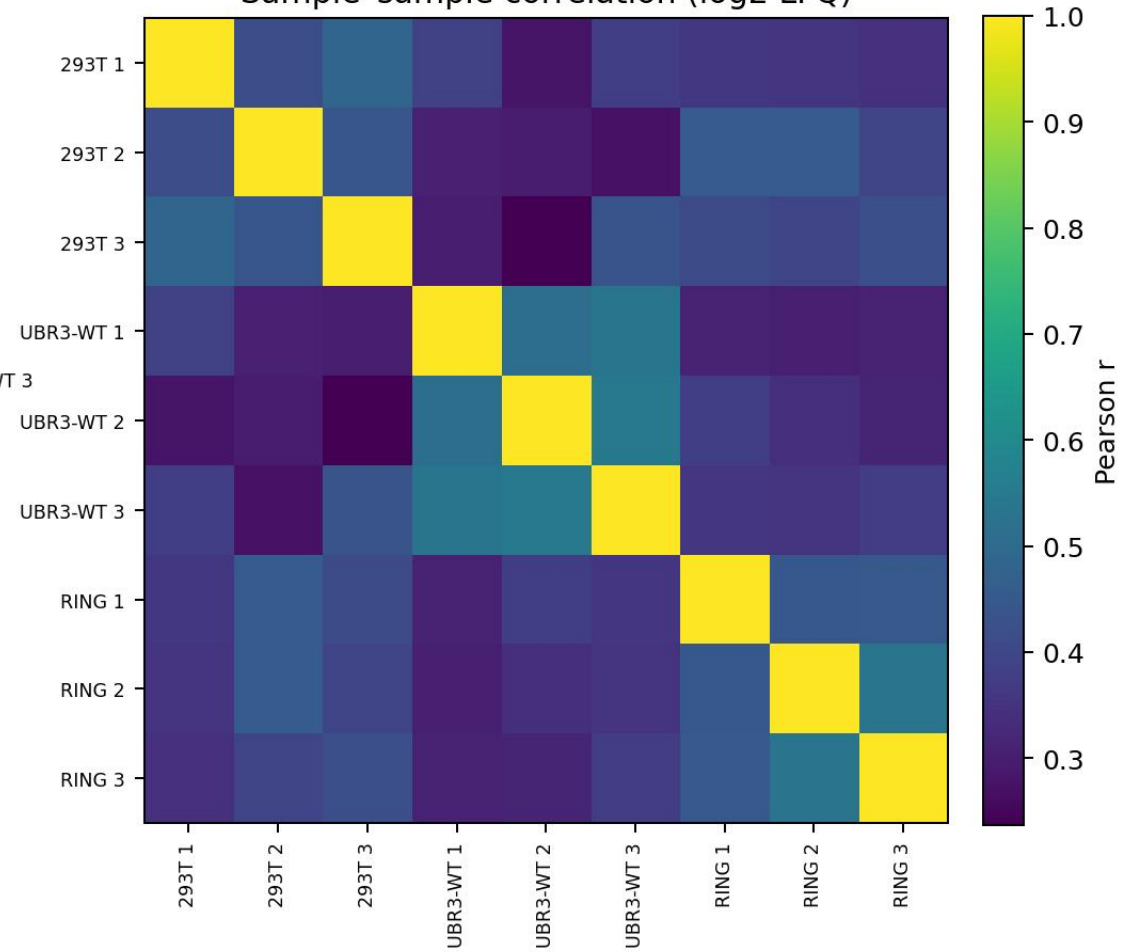

UBR3 interactors by cellular role
(row z-score of log2 LFQ; sorted by role, then WT enrichment)

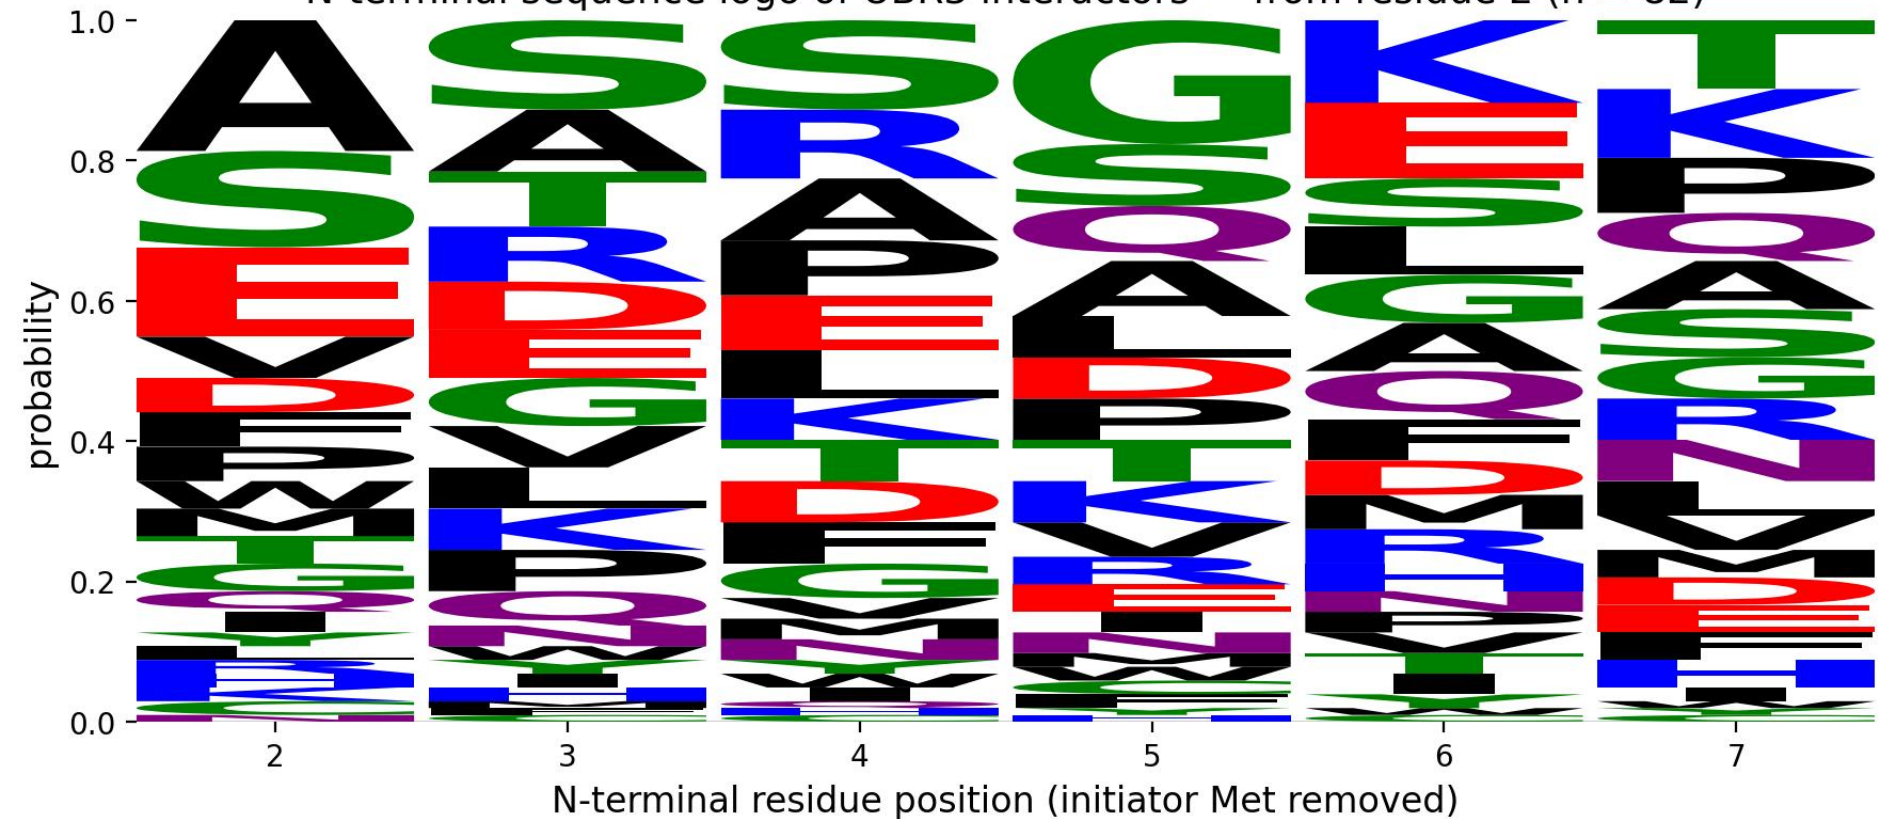

PCA of the 9 samples

Sample-sample correlation (log2 LFQ)

N-terminal sequence logo of UBR3 interactors — from residue 2 (n = 82)

position 2 = residue after the initiator Met
