

Stability of the UBR3-WT co-IP best hits (Yi et al. 2023 degradomics)

TMTpro-MS3 time course in WT extract, untreated · 45 of the 50 WT best hits quantified · no half-life column exists in the source table; half-lives fitted here

Medians, Mann-Whitney U (two-sided)

protein remaining at 15 h
hits 0.829 background 0.815 p = 0.80

decay rate k (1/h)
hits 0.0125 background 0.0134 p = 0.78

derived median half-life
hits 41 h background 41 h

M2 module vs background
0.576 vs 0.815 p = 0.069 (Bonferroni 0.28)
39 of 45 hits decay too slowly to reach 50% within the 15 h assay, so their half-lives are extrapolations.
